

Public Access Bleed Control Kit

Overview

Our Public Access Bleed Control Kits are designed to help control and stop severe bleeding quickly to increase the chances of saving a life, by decreasing response times and increasing the speed of treatment. With an increase in knife and other violent crimes, it is important to have publicly accessible bleed control packs available throughout cities in public venues.

Our kits contain best-in-class, proven equipment that is essential for medical and trauma management – and provides the layperson, bystander or trained medic with the means to immediately control life-threatening external haemorrhaging.

The pack is lightweight, allowing it to be attached to personnel, hung up, or kept within vehicles, with high visibility red colouring, allowing for rapid identification. It includes basic instructions for the layperson to have a straightforward understanding of the equipment included – and where and how to apply.

Product Code: **PR0252**
